Definition

The *span* of a finite set of vectors $v_1, \ldots, v_k \in \mathbf{R}^n$ is the set of all linear combiniations of the vectors $v_1, \ldots, v_k$.

More generally, given a set $A \subset \mathbf{R}^n$ the span of A is the set of all linear combinations formed from finite subsets of A. This is sometimes also called the *linear hull* of A.

The span of a set of vectors is a subspace.

Notation

We denote the span of $v_1, \ldots, x_k \in \mathbf{R}^d$ by

$$\operatorname{span}(\{v_1, \ldots, v_k\})$$

Other notation in use, in particular when we are dealing with the span of a set $A \subset \mathbf{R}^d$ is $\operatorname{lin} A$.
